## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 1 is objected to because of the following informalities: The word "distance" is missing after predetermined. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Vargo (U. S. Patent no. 5,369,925).

See figure 2 a plurality of surfaces 15,18, a fixed surface 16,17, resilient means 93, upright leg 11

Note: a resilient pad is considered a spring in the broadest reasonable interpretation.

4. Claims 2, 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Shyi (U. S. Patent no. 4,807,915).

See figures a plurality of surfaces 1 with openings 11, a fixed surface 2, resilient means 4, upright part 20

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1- 11 rejected under 35 U.S.C. 103(a) as being unpatentable over Jacoby et al (U. S. Patent no. 4,088,229) in view of Shyi.

Jacoby et al discloses:

See figures 1-6 a plurality of surfaces 45 with openings 48, a fixed surface 45c,46c, panel 35, upright part 30,31

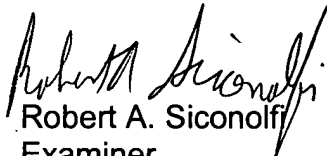

Jacoby et al does not disclose resilient means. Shyi teaches the use of resilient means (coil springs 4). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use resilient means as taught by Shyi in the system of Jacoby et al in order to absorb energy from the collision. The use of resilient means reduces the energy transmitted to the pallet rack which prevents damage.
